

Holbæk/Denmark DGI sports

Leisure & Regeneration Winning Competition

The Holbæk Harbour master plan and the DGI complex are part of the transformation of the town's historic commercial and transportation port into attractive urban area

The DGI sports & leisure complex is designed to complement the wider aspirations of the master plan. The building's disparate functions offer a flexible, multi-functional context that will reflect the multifaceted spectrum of activities that it serves, including a water culture centre, a flexible multi-purpose hall, cafes and services

The proposal's strikingly sculptural roof profile intentionally refers to the heritage and the scale of Holbæk's old harbour – the site of the shipyard, fishing boats and tar.

My role

As group leader of the competitions department at the time I was responsible for overseeing the project's development and progress, budget and resources. I was solely responsible for managing the delivery and production of the presentation material. It was my role to coordinate and assess the 3D visualisations, design the layout and produce and compile all the information for final delivery, as well as producing diagrams and text.
